

# Online backup has never been this easy

## Extra Flexibly, Control & Power

### **Microsoft SQL & Exchange Support**

The ideal way to protect your Microsoft database & messaging systems, even while these important assets are being used 24/7.

### **Account Creation System**

This server-based addition allows to create a simple customer sign-up form from a link on the web site. Customer evaluation accounts are automatically added to the backup server & their contact & billing information is captured & stored in any specific database.

### **Remote Manager**

Has a web-based Plug-in that allows management from any central location. Remotely manage & communicate with more than one backup server to create centralized management from anywhere in the world. Configure user access, display server status, search for account, review server logs and more.

- New user interface further enhances the usability & provides great flexibility for partners to do software re-branding.
- Smart Select allows automatic file selection for easy backups of Emails, Photos, Music & My Documents.
- Leverage Microsoft Task Scheduler which is supported by Windows Vista & most of the recent Microsoft Operating Systems
- Newly adopted storage algorithm increases the overall performance by up to 20%
- Bandwidth Throttling Support helps ISPs to better control the bandwidth usage.
- Improve licensing processes via key codes for Standard & Advanced versions.
- Advanced technologies & data protection industry standards ensures an appropriated protection on all levels.
- Automatic & easy-to-use processes allow even non-IT specialists to set up data backups just within a few clicks.
- Intelligent size reduction of backup data for faster backups even using low bandwidth
- Various licensing options & complete packages fulfill business growth and scalability demands.
